

Developer Evaluation Test Project

Overview

- The purpose of this project is to evaluate coding ability.
- Feel free to make any assumptions if the specifications are not entirely clear.
- The applicant should spend between 1- and 2-hours' worth of effort.
- The applicant is free to use any technology/frameworks as long as it's within the .Net ecosystem.
- The application/code will be evaluated according to the following:
 - Correctness (no bugs)
 - Layering/Structure
 - Implementation of project specifications
 - Code resiliency
 - Application of design principles

Specifications

Functional Requirements

- Create application to capture customer details.
- Customer details include:
 - Name
 - Surname
 - ID Number
 - Email Address
 - Tel. Number
 - Country
- Must be able to create/update/delete.
- Function to export entire list to file.

Technical Requirements

- Use database to store data (any database framework will do).
- Exported file must be in xml.
- Input fields to be validated prior to storing in database.
- Can be desktop app or web app

Submitting the Application

- Create a zip file containing the following
 - The compiled application ready to run.
 - A readme.txt file if there are any setup instructions or something the evaluator needs to know about the application.
 - All source code.
 - A backup of the database.
